

Start Learning Complex Numbers - Part 1

Number line $\mathbb{R}$

- field $+$ $\cdot$
- ordering $\leq$ (Archimedean, compatible with $+$ and $\cdot$, ...)
- complete

One can solve a lot of equations:

$$x + 5 = 1, \quad x + x = -1$$

$$x \cdot 5 = 1$$

$$x^2 = 2$$

We cannot solve: $\underbrace{x^2}_{x \cdot x} = -1$ (because $x^2 \geq 0$ for all $x \in \mathbb{R}$ and $-1 < 0$)
